Digital Ocean virtual machine instructions:

Dear COSC 4343 student,

Each one of you has been assigned an IP address to a Digital Ocean virtual Ubuntu machine to complete your work for this homework.

On each machine, I already installed mysql, apache, and phpmyadmin. This way, you can start with your homework 4 implementation right away without the need for you to install or setup any other software.

Please note that each of you have their own machine, that is, your assigned IP address (username: root and password: COSC4343Sec).

Also note that the login for MySQL and phpmyadmin credentials are set as follows:

username: root
password: COSC4343

Finally, these machines are created temporary for homework 4 use only, and therefore they will be destroyed/deleted a week after homework 4 is due. Make sure you backup any data you need from these machines before the deletion date.

- Homework 4 is due on Thurs. Nov. 11, 2021

- Digital Ocean machines are deleted on Thurs. Nov. 18, 2021.

The best way to access your machines is through ssh from terminal (on Mac) or PowerShell (on Windows). To access phpmyadmin, you can use any web browser and type your machine IP address /phpmyadmin. For example, if your IP address is aaa.bbb.ccc.ddd, then in the browser type:

aaa.bbb.ccc.ddd/phpmyadmin

Good luck. Please let me know if you have any questions.
